WEIGHT 04

# AOD-9604

16-amino-acid peptide from the tail of human growth hormone (177–191), plus one tyrosine

| CLASS | STUDIED FOR | HUMAN EVIDENCE | US STATUS |
|---|---|---|---|
| Peptide | Body fat, weight | Controlled trials; weight data unpublished | Not FDA approved |

## STUDIED FOR

| Body fat | Knee cartilage |
|---|---|
| HUMAN + ANIMAL | ANIMAL |

**Weight results were not published.** Six developer-funded trials in 893 people; the one paper on them reports safety only.

## HOW IT WORKS IN THE BODY

AOD-9604 → No GH receptor → Fat breakdown up → Less fat gain

- **Did not bind** the growth hormone receptor or make cells multiply (lab)
- **Fat breakdown** rose and weight gain fell in obese mice and rats
- **No rise in blood sugar** in animals, unlike whole growth hormone
- **In people,** no mechanism has been shown to cause weight loss

## EVIDENCE & WHAT'S KNOWN

### EVIDENCE

**CONTROLLED TRIALS**
LEVEL 4 OF 5

- 6 placebo-controlled trials, 893 people
- The published paper reports safety only
- No Phase 3 trial found

### NOT YET ESTABLISHED

- Weight effect in people
- Long-term safety
- Half-life in people
- Under-skin use in people

## QUICK PRACTICAL INFO

| HALF-LIFE | ROUTES STUDIED |
|---|---|
| Not established in people | By vein or by mouth in trials |
| **PHARMACOKINETICS** | **SOLD AS** |
| Not established in people | No approved form; compounding nomination withdrawn |
| **MONITORED IN TRIALS** | **SPORT (WADA)** |
| IGF-1, glucose tolerance, antibodies, ECG | Prohibited, class S2 |

## REGULATORY

| | |
|---|---|
| FDA | Not approved |
| FDA | Compounding nomination withdrawn; safety concerns |
| HHS | Not in the Oct 2026 peptide policy |
| WADA | Prohibited (S2) |
