SLEEP 03

CJC-1295

Lab-made GHRH analogue (29 amino acids) with an added group that binds blood albumin

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Peptide (GHRH analogue)	Growth hormone, IGF-1	Small human studies	Not FDA approved

STUDIED FOR

GH and IGF-1	HIV belly fat	Growth
HUMAN + ANIMAL	HUMAN	ANIMAL

No sleep studies found. Human studies measured growth hormone and IGF-1. Sleep was not measured.

HOW IT WORKS IN THE BODY

CJC-1295 → Binds albumin → Pituitary gland → GH, then IGF-1

- **Albumin binding** makes it last much longer than natural GHRH
- **Acts on the pituitary,** like GHRH, to release growth hormone
- **In healthy adults,** one injection raised GH for 6 days or more
- **Effects on sleep** are not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

SMALL HUMAN
LEVEL 3 OF 5

- Two small dose trials in healthy adults
- Phase II trial terminated, no results posted
- No study of sleep

NOT YET ESTABLISHED

- Long-term safety
- Effects on sleep
- Effects on fertility
- Content of products sold

QUICK PRACTICAL INFO

HALF-LIFE	ROUTES STUDIED
5.8 to 8.1 days (healthy adults)	Injection under the skin (trials)
PHARMACOKINETICS	**SOLD AS**
Binds albumin; IGF-1 above baseline up to 28 days with repeat doses	Not approved; not on FDA compounding bulks lists
MONITORED IN TRIALS	**SPORT (WADA)**
Growth hormone, IGF-1, drug levels, safety (trials)	Prohibited, class S2

REGULATORY

FDA	Not approved
FDA	Was Category 2 (safety risks); nominations withdrawn
HHS	Not in the Oct 2026 peptide policy
WADA	Prohibited (S2.2.4)
