EVIDENCE

FDA APPROVED
LEVEL 5 OF 5

- Label trials: 7,578 women

- WHO trial: no effect on male infertility

NOT YET ESTABLISHED

- Long-term use in men
- Dose for men
- Half-life in people

HOW IT WORKS IN THE BODY

Clomiphene ▶ Estrogen receptor ▶ More LH and FSH ▶ Testosterone

- **Label:** competes with estrogen at receptors in hypothalamus, pituitary, organs
- **Label:** first effect is a rise in pituitary release of LH and FSH
- **In men,** higher LH and FSH drive testosterone; the label does not describe this
- **Label:** no apparent progestogen, androgen or anti-androgen effects
