HAIR LOSS
11

Deuruxolitinib

Janus kinase (JAK) inhibitor taken by mouth, a small molecule developed as CTP-543

CLASS
JAK inhibitor

STUDIED FOR
Severe alopecia areata

HUMAN EVIDENCE
Large trials; FDA approved

US STATUS
FDA approved (Leqselvi)

STUDIED FOR

Alopecia areata
HUMAN

Not for pattern hair loss. Alopecia areata is an autoimmune disease. Leqselvi is not approved for male pattern hair loss or for people under 18.

HOW IT WORKS IN THE BODY

Deuruxolitinib ▶ JAK1, JAK2, TYK2 ▶ STAT signaling ▶ Immune attack

- **JAKs** pass on signals from cytokines and growth factors for immune function
- **In lab tests,** it blocked JAK1, JAK2 and TYK2 more strongly than JAK3
- **How this relates** to its effect on hair is not known, per the label

EVIDENCE & WHAT'S KNOWN

EVIDENCE

FDA APPROVED
LEVEL 5 OF 5

- 2 Phase 3 trials, 1,209 adults, 24 weeks
- SALT 20 or less: 29.6–33.0% (8 mg) vs 0.8%
- Duration of response not assessed

NOT YET ESTABLISHED

- Use in pattern hair loss
- Use under age 18
- How long response lasts

QUICK PRACTICAL INFO

HALF-LIFE
About 4 hours

ROUTES STUDIED
By mouth (tablets)

PHARMACOKINETICS
Peak within 1.5 hours; liver metabolism (CYP2C9, CYP3A4)

SOLD AS
Prescription tablets (Leqselvi)

MONITORED IN TRIALS
CYP2C9 genotype before use; blood counts, blood fats

SPORT (WADA)
Not on the 2026 list

REGULATORY

FDA	Approved: severe alopecia areata, adults (2024)
FDA	Boxed warning: infections, cancer, heart, clots
MHRA	Approved, severe alopecia areata (2026)
WADA	Not on the 2026 list
