SLEEP 04

Emideltide (DSIP)

Nine-amino-acid peptide (delta sleep-inducing peptide), first found in rabbit blood in 1963

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Peptide	Insomnia, withdrawal	Small human studies	Not FDA approved

STUDIED FOR

Chronic insomnia	Drug withdrawal	Narcolepsy
HUMAN + ANIMAL	HUMAN	HUMAN

Findings differ by research group. Early studies by one group reported better sleep. Double-blind studies by other groups (1987, 1992) found little or no benefit.

HOW IT WORKS IN THE BODY

Emideltide ▶ Opioid system ▶ Endorphin release ▶ Delta brain waves

- **Increased deep-sleep (delta) brain waves** in rabbits, rats and cats
- **Acts through the opioid system** in animals, without binding opioid receptors (FDA)
- **Can trigger endorphin release,** per FDA's review of animal data
- **In people,** the mechanism is not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

SMALL HUMAN
LEVEL 3 OF 5

- Small studies, 1981–1998, all by vein
- 209 people in published studies (FDA count)
- No registered trial

NOT YET ESTABLISHED

- Long-term safety
- Under-skin injection data
- Addiction risk
- Standard toxicity studies

QUICK PRACTICAL INFO

HALF-LIFE	ROUTES STUDIED
About 8 minutes in the blood (people)	Injection into a vein (studies)
PHARMACOKINETICS	**SOLD AS**
Cleared from the blood very fast; no data for under-skin use	Not approved; FDA panel voted against compounding use
MONITORED IN TRIALS	**SPORT (WADA)**
Sleep recordings, withdrawal signs (studies)	Not named on the 2026 list; S0 status not stated

REGULATORY

FDA	Not approved; FDA advised against 503A listing
FDA	Advisory panel vote failed 6–7, July 2026
HHS	Not in the Oct 2026 peptide policy
WADA	Not named on the 2026 list
