LONGEVITY 11

Humanin

Small peptide made by the body, coded in mitochondrial DNA; HNG is a lab-made, more potent variant

CLASS Peptide

STUDIED FOR Nerve cells, insulin, aging

HUMAN EVIDENCE Lab or animal only; levels measured in people

US STATUS Not FDA approved

STUDIED FOR

Nerve cell survival — ANIMAL	Insulin sensitivity — ANIMAL	Memory — ANIMAL
Body fat — ANIMAL	Lifespan — ANIMAL	

Never given to people. Human studies only measure humanin in blood or muscle and compare groups, such as children of centenarians.

HOW IT WORKS IN THE BODY

Humanin ▶ Nerve cells ▶ Blocks cell death ▶ Insulin response

- **Blocked nerve cell death** from Alzheimer's genes and beta-amyloid (lab)
- **Improved insulin sensitivity** when infused into rodent brains
- **Lengthened worm life** slightly, depending on the daf-16/FOXO gene
- **In people,** the mechanism is not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

LAB OR ANIMAL
LEVEL 1 OF 5

- Worm, mouse, rat and cell studies since 2001
- Human studies measure levels only
- No trial giving humanin registered

NOT YET ESTABLISHED

- Safety in people
- Half-life in people
- Dose in people
- Meaning of lab clumping

QUICK PRACTICAL INFO

HALF-LIFE Not established in people

ROUTES STUDIED None studied in people

PHARMACOKINETICS Not established in people

SOLD AS "Research use only" (not for human use)

MONITORED IN TRIALS Not established (never given to people)

SPORT (WADA) Not named on the 2026 list

REGULATORY

FDA	Not approved; not on compounding lists
WADA	Not named; S0 bans unapproved substances
