ENERGY 04

Inositol

Small cell-signalling molecule, sometimes called a pseudovitamin; the "I" in MIC injection blends

CLASS
Small molecule (pseudovitamin)

STUDIED FOR
No studies found for energy or fat loss

HUMAN EVIDENCE
No human studies found for this use

US STATUS
Not FDA approved · compounding under review

STUDIED FOR

No published studies. No published human study of injected inositol, alone or in MIC blends, for energy or fat loss was found.

HOW IT WORKS IN THE BODY

Inositol ▶ Cell signalling ▶ MIC blends ▶ Effect unknown

- Used by the body in **cell signalling**; no recognized deficiency disease
- The **"I" in MIC** (methionine, inositol, choline) injections
- **In people,** a mechanism for energy or fat loss is not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

LAB OR ANIMAL
LEVEL 1 OF 5

- No human study of inositol injections found
- No study of MIC blends for energy or fat loss
- Lab and animal work not reviewed for this use

NOT YET ESTABLISHED

- Any effect of injections
- Side-effect profile
- Half-life in people
- Dose in people

QUICK PRACTICAL INFO

HALF-LIFE
Not established in people

ROUTES STUDIED
Not established (no injection studies)

PHARMACOKINETICS
Not established

SOLD AS
Compounded (Rx) MIC and lipotropic blends; not FDA approved

MONITORED IN TRIALS
Not established (no trials)

SPORT (WADA)
Not on the 2026 list

REGULATORY

- **FDA** — No approved product; 503B nomination under review
- **FDA** — MIC injections recalled over sterility (lots)
- **WADA** — Not listed; IV over 100 mL per 12 h banned (M2.2)
