TRT 10

Kisspeptin

Family of natural peptide hormones; kisspeptin-54 and the 10-amino-acid kisspeptin-10 are most studied

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Peptide hormone	LH, FSH, testosterone, desire	Small human studies	Not FDA approved

STUDIED FOR

LH and FSH release	Testosterone	Sexual desire
HUMAN	HUMAN	HUMAN

Erection	Hypogonadism
HUMAN	HUMAN

Studies are small and short. Physiology studies ran from minutes to 12 days. None is a large treatment trial.

EVIDENCE & WHAT'S KNOWN

EVIDENCE

SMALL HUMAN
LEVEL 3 OF 5

- Small physiology studies, 5 to 40 people
- Single doses up to 12 days
- Phase 1 and 2 trials under way in the US

NOT YET ESTABLISHED

- Long-term safety
- Half-life in people
- Effects of months of use
- Effects on fertility

HOW IT WORKS IN THE BODY

Kisspeptin ▶ GnRH release ▶ LH and FSH ▶ Testosterone

- **Acts on the hypothalamus** to release GnRH, per human studies
- **GnRH** makes the pituitary release LH and FSH
- **Constant infusion** for 5 days: LH and FSH fell back to placebo levels
- **Brain scans** showed changes in areas that process sexual cues

QUICK PRACTICAL INFO

HALF-LIFE	ROUTES STUDIED
Not established	Into a vein (infusion) or under the skin, in studies
PHARMACOKINETICS	**SOLD AS**
Limited human data	Research trials; kisspeptin-10 in FDA Category 2
MONITORED IN TRIALS	**SPORT (WADA)**
LH, FSH, testosterone; brain activity (fMRI)	Prohibited, class S2 (males)

REGULATORY

FDA	Not approved
FDA	Kisspeptin-10 in 503A Category 2 (Sep 2023)
DEA	Not a controlled substance
WADA	Prohibited at all times in males (S2)
