LONGEVITY 13

KP1 (Klotho-derived peptide 1)

30-amino-acid peptide cut from the human klotho protein (positions 57 to 86)

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Peptide	Kidney scarring, kidney injury	Lab or animal only	Not FDA approved

STUDIED FOR

Kidney scarring — ANIMAL	Acute kidney injury — ANIMAL	Liver scarring — ANIMAL
Kidney cell aging — ANIMAL	Erections — ANIMAL	

Mostly one research group. Almost all KP1 studies come from one kidney research group in Guangzhou, China. No human study is published or registered.

HOW IT WORKS IN THE BODY

KP1 ▶ TGF-β receptor ▶ Blocks TGF-β ▶ Less scarring

- **Bound the TGF-β type 2 receptor** and blocked TGF-β in kidney cells (lab)
- **Restored kidney klotho** in mice; gathered mainly in injured kidneys
- **Binds ATAD3A,** a mitochondrial protein, in kidney cells (2026, lab)
- **In people,** the mechanism is not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

LAB OR ANIMAL

LEVEL 1 OF 5

- Mouse, rat and cell studies since 2022
- No published human study
- No standard toxicity studies found

NOT YET ESTABLISHED

- Safety in people
- Half-life in people
- Dose in people
- Side-effect profile

QUICK PRACTICAL INFO

HALF-LIFE: Not established in people	ROUTES STUDIED: None studied in people
PHARMACOKINETICS: Not established in people	SOLD AS: "Research use only" (not for human use)
MONITORED IN TRIALS: Not established (no human studies)	SPORT (WADA): Not named on the 2026 list

REGULATORY

FDA	Not approved; not on compounding lists
WADA	Not named; S0 bans unapproved substances
