RECOVERY 03

KPV

Three-amino-acid peptide (Lys-Pro-Val), the last three amino acids of the hormone alpha-MSH

CLASS Peptide

STUDIED FOR Gut inflammation, eye healing

HUMAN EVIDENCE Lab or animal only

US STATUS Not FDA approved · compounding allowed

STUDIED FOR

Inflammation — ANIMAL

Corneal healing — ANIMAL

No human study published. FDA's 2026 review found no clinical studies, no human pharmacokinetic data and no case reports for any route.

HOW IT WORKS IN THE BODY

KPV → PepT1 uptake → NF-kappaB blocked → Less inflammation

- **Not through melanocortin receptors,** unlike alpha-MSH, in lab and mouse tests
- **Blocked NF-kappaB** and inflammatory signals in human gut and immune cells (lab)
- **Enters gut cells** through the PepT1 transporter (lab)
- **In people,** the mechanism is not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

LAB OR ANIMAL
LEVEL 1 OF 5

- Mouse, rabbit and cell studies only
- No human studies or case reports (FDA)
- No trial on ClinicalTrials.gov

NOT YET ESTABLISHED

- Long-term safety
- Half-life in people
- Side-effect profile
- Animal toxicity studies

QUICK PRACTICAL INFO

HALF-LIFE Not established in people

ROUTES STUDIED None studied in people

PHARMACOKINETICS No human data; did not pass intact human skin (lab)

SOLD AS Compounded (Rx) or "research use only"

MONITORED IN TRIALS Not established in people

SPORT (WADA) Not named on the 2026 list; S0 status unconfirmed

REGULATORY

FDA	Not approved
HHS	Compounding allowed, 10 conditions (Oct 2026)
WADA	Not named; class S0 may apply
