- Parkinson's disease — HUMAN
- Blood sugar — HUMAN
- Leg artery disease — HUMAN

Almost all trials used capsules. Injected NR has been described in people in one chart review of 8 people. Mouse results have not been reproduced in most human trials.

HOW IT WORKS IN THE BODY

NR → Converted to NAD+ → NAD+ metabolism → Cell function

- **Form of vitamin B3** that the body can turn into the coenzyme NAD+
- **Raised NAD+** in blood and muscle in human trials
- **Metabolism and aging** effects come mainly from mouse studies
- **In people,** effects on health outcomes have been small, mixed or absent
