LONGEVITY 14

NMN (nicotinamide mononucleotide)

Molecule the body uses to make the coenzyme NAD+; treated by EFSA as a source of niacin (vitamin B3)

CLASS NAD+ precursor (dietary supplement)

STUDIED FOR NAD+ levels, insulin, walking

HUMAN EVIDENCE Controlled human trials

US STATUS Not FDA approved · sold as a supplement

STUDIED FOR

- **NAD+ levels** — HUMAN
- **Blood sugar** — HUMAN + ANIMAL
- **Walking, strength** — HUMAN
- **Body weight** — HUMAN + ANIMAL
- **Age-related decline** — ANIMAL

No aging outcome tested. No trial has measured aging or lifespan in people. A 2026 meta-analysis of 15 small trials found no clear effect on weight, sugar or cholesterol.

HOW IT WORKS IN THE BODY

NMN ▶ Converted to NAD+ ▶ Energy metabolism ▶ Cell function

- **Used by the body to make NAD+,** a coenzyme cells need for energy
- **NAD+ availability falls with age** in mice
- **Raised blood NAD+** in human trials
- **In people,** effects on aging are not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

CONTROLLED TRIALS
LEVEL 4 OF 5

- 15 randomized trials pooled (2026)
- Trials ran 14 days to 24 weeks
- Drug form MIB-626 in Phase 2 trials

NOT YET ESTABLISHED

- Long-term safety
- Half-life in people
- Effect on aging in people
- FDA supplement position

QUICK PRACTICAL INFO

HALF-LIFE Not established in people

ROUTES STUDIED By mouth

PHARMACOKINETICS Blood NAD+ rose with dose (MIB-626, 14 days)

SOLD AS Dietary supplement (FDA position unconfirmed)

MONITORED IN TRIALS Blood NAD+, adverse events, liver enzymes

SPORT (WADA) Not on the 2026 list

REGULATORY

FDA	Not approved as a drug
FDA	12 NDI notifications, 2020 to 2026; replies unknown
EFSA	Panel opinion on β-NMN as a novel food (May 2026)
WADA	Not listed
