BRAIN 08

Pinealon

Synthetic three-amino-acid peptide (Glu-Asp-Arg) from a Saint Petersburg gerontology institute

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Peptide	Stress, “biological age” markers	Small human studies	Not FDA approved

STUDIED FOR

Stress symptoms — HUMAN	“Biological age” — HUMAN	Brain injury effects — HUMAN
Oxidative stress — ANIMAL	Learning — ANIMAL	

Human data are limited. A few small Russian studies, mostly by the developers' network, with few design details. No registered trial.

EVIDENCE & WHAT'S KNOWN

EVIDENCE

SMALL HUMAN
LEVEL 3 OF 5

- Few small Russian studies, mostly uncontrolled
- Published in Russian (Adv Gerontol)
- No registered trial

NOT YET ESTABLISHED

- Long-term safety
- Half-life in people
- Side-effect profile
- Effect on blood stem cells

HOW IT WORKS IN THE BODY

Pinealon ▶ Enters cells ▶ Gene activity ▶ Less cell stress

- **In cells,** limited reactive oxygen species under stress and reduced cell death
- **Developers propose** it binds DNA-packing proteins or RNA (a hypothesis)
- Mostly **cell and animal work** by the peptide's developers
- **In people,** the mechanism is not established

QUICK PRACTICAL INFO

HALF-LIFE: Not established in people	ROUTES STUDIED: By mouth (capsules) in Russian studies
PHARMACOKINETICS: Not established	SOLD AS: No approved product; not on FDA compounding lists
MONITORED IN TRIALS: Stress questionnaires, “biological age” markers	SPORT (WADA): Not on the 2026 list

REGULATORY

FDA	Not approved; not on compounding lists
HHS	Not in the Oct 2026 peptide policy
EMA	Not authorised
WADA	Not named; S0 status not stated
