WEIGHT 13

Retatrutide

Experimental injected peptide (LY3437943) that acts on three hormone receptors: GIP, GLP-1 and glucagon

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Peptide	Weight, diabetes, knee, sleep apnea	Controlled human trials	Not FDA approved

STUDIED FOR

- **Body weight** — HUMAN
- **Blood sugar** — HUMAN
- **Knee pain** — HUMAN
- **Sleep apnea** — HUMAN

Phase 3 trials, no approval yet. A heart and kidney outcomes trial of about 10,000 people is due to finish in 2029.

HOW IT WORKS IN THE BODY

Retatrutide ▶ Three receptors ▶ Hormone signals ▶ Body weight

- **Acts on three hormone receptors** at once: GIP, GLP-1 and glucagon
- **Given once a week** under the skin in trials
- **No FDA label,** so there is no approved mechanism statement
- **Heart rate** rose with dose in Phase 2, peaked at 24 weeks, then fell

EVIDENCE & WHAT'S KNOWN

EVIDENCE

CONTROLLED TRIALS
LEVEL 4 OF 5

- Phase 2: 338 adults with obesity, 48 weeks
- TRIUMPH-1: 2,339 adults, 80 weeks
- TRIUMPH-2: 1,152 adults with type 2 diabetes

NOT YET ESTABLISHED

- Long-term safety
- Thyroid C-cell tumor risk
- Heart and kidney outcomes
- Half-life in people

QUICK PRACTICAL INFO

HALF-LIFE	ROUTES STUDIED
Not established in people	Injection under the skin, once weekly (trials)
PHARMACOKINETICS	**SOLD AS**
Limited human data	Not approved; FDA says it cannot be compounded
MONITORED IN TRIALS	**SPORT (WADA)**
Weight, HbA1c, heart rate, knee pain, sleep apnea index	Not named on the 2026 list; S0 status unconfirmed

REGULATORY

FDA	Not approved; cannot be used in compounding
FDA	Warning letters to "research use" sellers
MHRA	Not authorised; MHRA says sales are illegal
WADA	Not named; class S0 may apply
