HAIR LOSS 15

Ritlecitinib

Kinase inhibitor taken by mouth that irreversibly blocks JAK3 and TEC-family kinases

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
JAK3/TEC kinase inhibitor	Severe alopecia areata	Large trials; FDA approved	FDA approved (Litfulo)

STUDIED FOR

Alopecia areata
HUMAN

Not for pattern hair loss. Alopecia areata is an autoimmune disease. Litfulo is not a treatment for male pattern hair loss.

HOW IT WORKS IN THE BODY

Ritlecitinib ▶ JAK3 and TEC ▶ Immune signaling ▶ Immune attack

- **Irreversibly blocks** the ATP binding site of JAK3 and TEC-family kinases
- **In cells,** it blocks cytokine-induced STAT activation via JAK3
- **Relevance** of each enzyme to the effect is not known, per the label
- **In dogs,** high doses caused reversible hearing changes

EVIDENCE & WHAT'S KNOWN

EVIDENCE

FDA APPROVED
LEVEL 5 OF 5

- Phase 2b/3 trial, 718 people aged 12+
- SALT 20 or less at week 24: 23% (50 mg) vs 2%
- Phase 2a trial, 142 adults

NOT YET ESTABLISHED

- Use in pattern hair loss
- Cause of dog hearing changes

QUICK PRACTICAL INFO

HALF-LIFE	ROUTES STUDIED
1.3 to 2.3 hours	By mouth (capsules)
PHARMACOKINETICS	**SOLD AS**
Peak within 1 hour; many pathways (GST, CYP enzymes)	Prescription capsules (Litfulo)
MONITORED IN TRIALS	**SPORT (WADA)**
Lymphocytes and platelets before starting; infections	Not on the 2026 list

REGULATORY

FDA	Approved: severe alopecia areata, age 12+ (2023)
FDA	Boxed warning: infections, cancer, heart, clots
EMA	Authorised Sep 2023, age 12+
WADA	Not on the 2026 list
