HAIR LOSS 16

RU58841

Non-steroidal antiandrogen that blocks the androgen receptor, first reported in 1994 for skin use

CLASS
Non-steroidal antiandrogen

STUDIED FOR
Male pattern hair loss

HUMAN EVIDENCE
One drug-level study in 6 men

US STATUS
Not FDA approved

STUDIED FOR

Male pattern loss
ANIMAL

Skin oil glands
ANIMAL

No human hair trials. No published or registered trial in people with hair loss was found. The one human study measured drug levels after one dose.

HOW IT WORKS IN THE BODY

RU58841 ▶ Androgen receptor ▶ Blocks DHT action ▶ Hair cycle

- **Blocks the androgen receptor** rather than lowering hormone levels
- **In cells,** about as strong as hydroxyflutamide, a prostate cancer drug
- **In scalp grafts on mice,** more follicles started a new hair cycle
- **In people,** the mechanism is not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

CASE REPORTS
LEVEL 2 OF 5

- Animal and scalp-graft studies, 1994–98
- No human hair-loss trials
- 1 single-dose study, 6 men (2026)

NOT YET ESTABLISHED

- Effect on hair in people
- Side-effect profile
- Half-life in people
- Long-term safety

QUICK PRACTICAL INFO

HALF-LIFE
Not established in people

ROUTES STUDIED
On the scalp (single dose in 6 men)

PHARMACOKINETICS
Found in blood after one scalp dose; 5 metabolites in urine

SOLD AS
Not approved anywhere; sold online as "research use only"

MONITORED IN TRIALS
Drug levels, urine steroid profile (one study)

SPORT (WADA)
Not named on the 2026 list; class S0 wording may cover it

REGULATORY

FDA	Not approved for any use
FDA	"Research use" sales to consumers illegal (GLP-1)
WADA	Not named; S0 may apply (no ruling)
