WEIGHT 15

Survodutide

Experimental injected peptide (BI 456906) that acts on two hormone receptors: glucagon and GLP-1

CLASS Peptide

STUDIED FOR Weight, liver disease (MASH)

HUMAN EVIDENCE Controlled human trials

US STATUS Not FDA approved

STUDIED FOR

Body weight	Weight with diabetes	Fatty liver (MASH)
HUMAN	HUMAN	HUMAN

Heart trial results not yet published. A heart-safety trial of about 5,500 people reached primary completion in June 2026; Phase 3 MASH trials are recruiting.

HOW IT WORKS IN THE BODY

Survodutide → Glucagon receptor → GLP-1 receptor → Weight, liver fat

- **Acts on two hormone receptors:** glucagon and GLP-1
- **Given once a week** under the skin in trials
- **Brain appetite areas** studied in mice and lab work
- **No FDA label,** so there is no approved mechanism statement

EVIDENCE & WHAT'S KNOWN

EVIDENCE

CONTROLLED TRIALS
LEVEL 4 OF 5

- Phase 2 obesity: 387 adults, 46 weeks
- SYNCHRONIZE-1: 725 adults, 76 weeks
- Phase 2 MASH: 293 adults, liver biopsies

NOT YET ESTABLISHED

- Long-term safety
- Heart outcomes (unpublished)
- Half-life in people

QUICK PRACTICAL INFO

HALF-LIFE
Not established in people

ROUTES STUDIED
Injection under the skin, once weekly (trials)

PHARMACOKINETICS
Limited human data

SOLD AS
Not approved; FDA warned "research use" sellers

MONITORED IN TRIALS
Weight, HbA1c, liver biopsy, stomach and bowel effects

SPORT (WADA)
Not named on the 2026 list; S0 status unconfirmed

REGULATORY

FDA	EMA	WADA
Not approved; warned "research use" sellers	Not authorised	Not named; class S0 may apply
