VITALITY 02

Tadalafil

Small-molecule PDE5 inhibitor taken by mouth; active ingredient in Cialis and Adcirca

CLASS
PDE5 inhibitor

STUDIED FOR
ED, enlarged prostate, PAH (lungs)

HUMAN EVIDENCE
Large trials; FDA approved

US STATUS
FDA approved (Cialis, Adcirca)

STUDIED FOR

- **Erections** — HUMAN
- **Enlarged prostate** — HUMAN
- **Lung artery pressure** — HUMAN

Compounded forms are off-label. No published human study tested tadalafil as a gum, gummy or troche, or with oxytocin or PT-141.

HOW IT WORKS IN THE BODY

Tadalafil ▶ PDE5 blocked ▶ More cGMP ▶ Muscle relaxes

- **Blocks PDE5,** the enzyme that breaks down cGMP, per the label
- **Needs sexual stimulation** to affect erections
- **Same cGMP effect** in prostate, bladder and their blood vessels
- **For BPH,** how it eases symptoms is not established (label)

EVIDENCE & WHAT'S KNOWN

EVIDENCE

FDA APPROVED
LEVEL 5 OF 5

- Approved for ED 2003, PAH 2009, BPH 2011
- 7 main 12-week ED trials in the label
- BPH dose-finding trial: 1,058 men

NOT YET ESTABLISHED

- Combining with other PDE5 drugs
- How it eases BPH symptoms
- Use after a recent heart attack

QUICK PRACTICAL INFO

HALF-LIFE
17.5 hours in healthy people

ROUTES STUDIED
By mouth (tablets; a chewable tablet was approved in 2024)

PHARMACOKINETICS
Peak in 30 minutes to 6 hours (median 2 hours); liver (CYP3A4)

SOLD AS
Prescription tablets (Cialis, Adcirca)

MONITORED IN TRIALS
Blood pressure, vision and hearing changes, erections over 4 hours

SPORT (WADA)
Not on the 2026 list

REGULATORY

FDA	Approved: Cialis 2003 (BPH 2011), Adcirca 2009
MHRA	Cialis Together 10 mg: pharmacy medicine (2023)
EMA	Cialis authorised 2002; Adcirca 2008
WADA	Not on the 2026 list
