RECOVERY 02

TB-500

Synthetic 7-amino-acid peptide (Ac-LKKTETQ), copied from part of the protein thymosin beta-4

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Peptide	Tendon repair, wound healing	Case reports only	Not FDA approved · compounding allowed

STUDIED FOR

Nerve injury	Wound healing
HUMAN	ANIMAL

Not the same as thymosin beta-4. TB-500 copies 7 of the protein's 43 amino acids. FDA notes that human trials of the full protein do not apply to TB-500.

HOW IT WORKS IN THE BODY

TB-500 ▶ Actin binding ▶ Cell movement ▶ Tissue repair

- **Contains the actin-binding part** of thymosin beta-4; same binding proposed
- **FDA:** not known whether actin binding explains any reported effect
- **In horses,** broken into fragments; gone from blood after 6 to 10 hours
- **In people,** the mechanism is not established

EVIDENCE & WHAT'S KNOWN

EVIDENCE

CASE REPORTS
LEVEL 2 OF 5

- Mostly animal and cell data
- 1 case report: 3 people, mixed with other drugs
- No clinical trial results

NOT YET ESTABLISHED

- Long-term safety
- Half-life in people
- Side-effect profile
- Animal toxicity studies

QUICK PRACTICAL INFO

HALF-LIFE	ROUTES STUDIED
Not established in people	Only gum injections, in one 3-person mixed case report
PHARMACOKINETICS	**SOLD AS**
No human data; horses: cleared from blood in 6 to 10 hours	Compounded (Rx) or "research use only"
MONITORED IN TRIALS	**SPORT (WADA)**
Numb area, sensory recovery (case report)	Prohibited, class S2

REGULATORY	FDA	HHS	WADA
	Not approved	Compounding allowed, 10 conditions (Oct 2026)	Prohibited (S2)
