TRT 16

Testosterone enanthate

Testosterone ester in oil, broken down to free testosterone after injection into muscle or under the skin

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Hormone (steroid ester)	Low testosterone, contraception	Large trials; FDA approved	FDA approved (Xyosted, generics)

STUDIED FOR

Low testosterone	Sperm suppression	Blood pressure
HUMAN	HUMAN	HUMAN

Approval trials were open-label. Xyosted trials measured hormone levels in men with hypogonadism; they were not built to test symptoms.

HOW IT WORKS IN THE BODY

Enanthate ester ▶ Free testosterone ▶ Androgen receptor ▶ Male traits

- **Label:** testosterone drives male sex organ growth and keeps up male traits
- **Ester:** broken down to free testosterone after injection
- **Feedback:** lowers LH; at large doses FSH and sperm production

EVIDENCE & WHAT'S KNOWN

EVIDENCE

FDA APPROVED
LEVEL 5 OF 5

- FDA approved 1953 (Delatestryl); Xyosted 2018
- Xyosted: 150 men, 52 weeks, open-label
- WHO study: 271 men, weekly injections

NOT YET ESTABLISHED

- Use for age-related low T
- Half-life of the ester

QUICK PRACTICAL INFO

HALF-LIFE	ROUTES STUDIED
Testosterone: 10 to 100 minutes (label); ester figure not given	Injection into muscle; weekly autoinjector under the skin
PHARMACOKINETICS	**SOLD AS**
Xyosted: median peak about 11.9 hours after weekly dose	Prescription (Schedule III)
MONITORED IN TRIALS	**SPORT (WADA)**
Hematocrit about every 3 months, blood pressure (Xyosted label)	Prohibited, class S1

REGULATORY

FDA	Approved for hypogonadism (Xyosted, generics)
DEA	Schedule III anabolic steroid
WADA	Prohibited at all times (S1)
