TRT 17

Testosterone undecanoate

Testosterone ester with a long fatty-acid chain; given as oral capsules or as an injection into muscle

CLASS	STUDIED FOR	HUMAN EVIDENCE	US STATUS
Hormone (steroid ester)	Low testosterone	Large trials; FDA approved	FDA approved (Aveed, Jatenzo, Tlando, Kyzatrex)

STUDIED FOR

Low testosterone	Blood pressure	Sperm production
HUMAN	HUMAN	ANIMAL

Approval trials were open-label. Each brand was approved on hormone levels; trials were not built to test symptoms, heart outcomes or fertility.

HOW IT WORKS IN THE BODY

Undecanoate ester ▶ Free testosterone ▶ Androgen receptor ▶ Male traits

- **Ester:** the fatty-acid chain is cut off, releasing testosterone
- **Label:** testosterone drives male sex organ growth and keeps up male traits
- **Feedback:** lowers LH and FSH; large doses can suppress sperm
- **Sperm suppression** reversed in rats, dogs and monkeys (animal data)

EVIDENCE & WHAT'S KNOWN

EVIDENCE

FDA APPROVED
LEVEL 5 OF 5

- 4 FDA-approved brands (2014 to 2022)
- Open-label trials, 95 to 166 men each
- Aveed: 130 men followed 84 weeks

NOT YET ESTABLISHED

- Use for age-related low T
- Use in males under 18
- Half-life of the ester

QUICK PRACTICAL INFO

HALF-LIFE
Testosterone: 10 to 100 minutes (label); ester figure not given

ROUTES STUDIED
Oral capsules; injection into the buttock muscle (Aveed)

PHARMACOKINETICS
Aveed: peak after a median of 7 days (range 4 to 42)

SOLD AS
Prescription (Schedule III); Aveed only via a REMS program

MONITORED IN TRIALS
PSA, hemoglobin, hematocrit, lipids (Aveed label); blood pressure

SPORT (WADA)
Prohibited, class S1

REGULATORY

FDA	DEA	WADA
Approved; Aveed boxed warning (POME, anaphylaxis)	Schedule III anabolic steroid	Prohibited at all times (S1)
